

Noptel

Shooter Training and Analysis systems

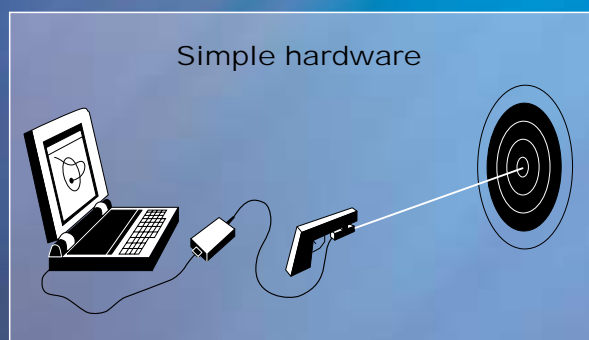

NOPTEL – THE PIONEERS OF MARKSMANSHIP TRAINING

Every shot tells a story

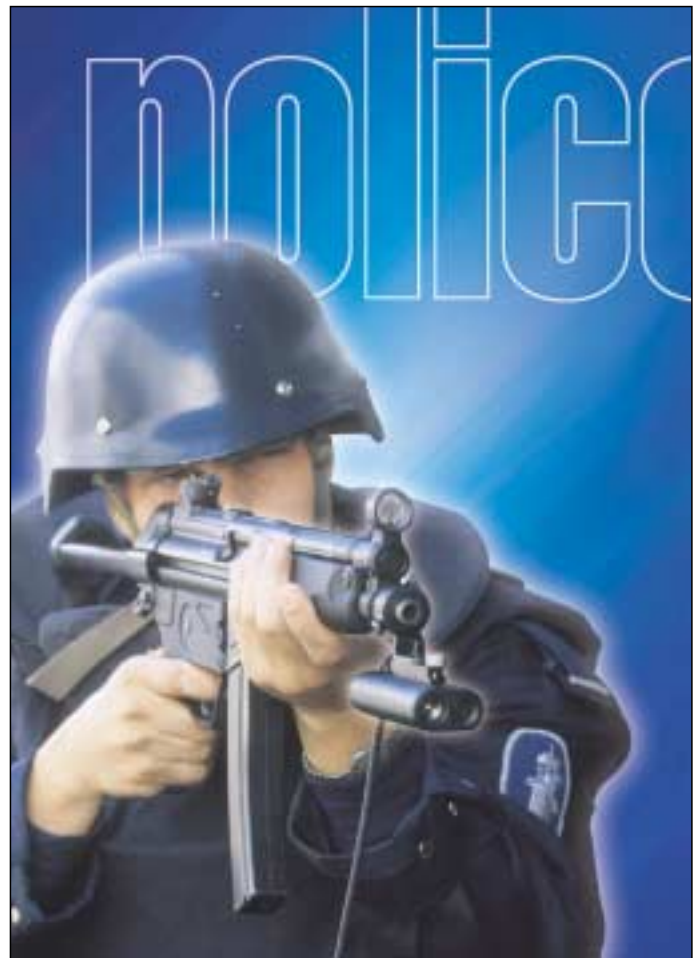

The Noptel ST-2000 products feature accurate measurement of the gun orientation path on the target surface before and after the shot, and record the shot itself.

A skill analysis may be carried out using either a graphical presentation or the numerical data derived from the path, or both of these.

Confidence in shooting skills

Reima Pensala, Firearms Instructor,
Police Technical Centre, Finland:

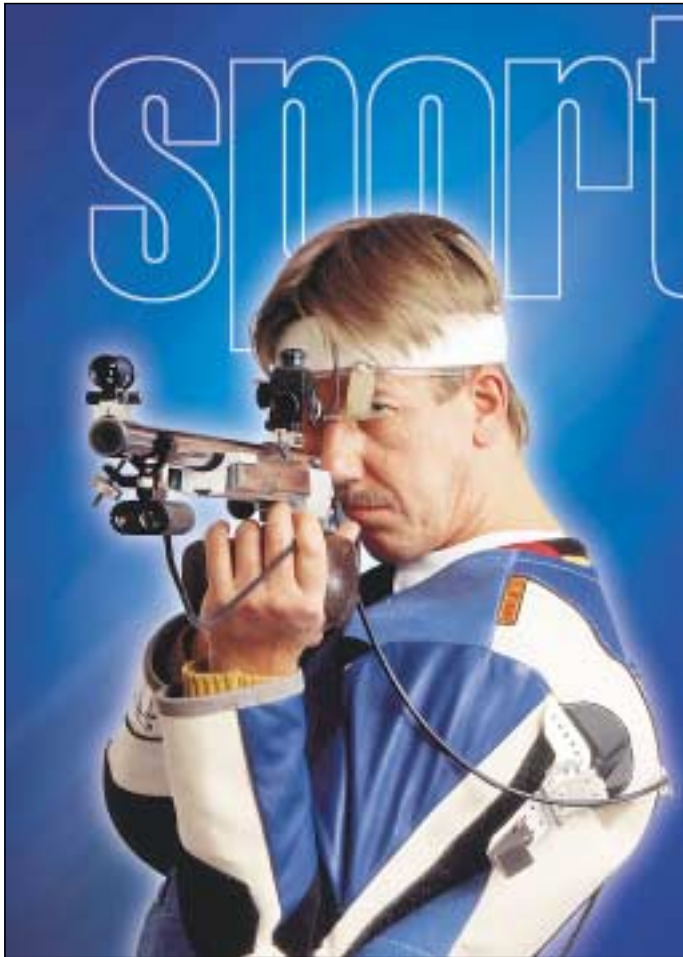

"Even one miss can be costly and the damage perhaps irreparable. The Noptel ST-2000 makes it easy to arrange training sessions. The Noptel equipment makes the instructor's work easier and faster, and it provides great help in identifying and correcting faults in shooting technique."

ST-2000 PISTOLMAN

Shooting for Gold

Training with the best techniques

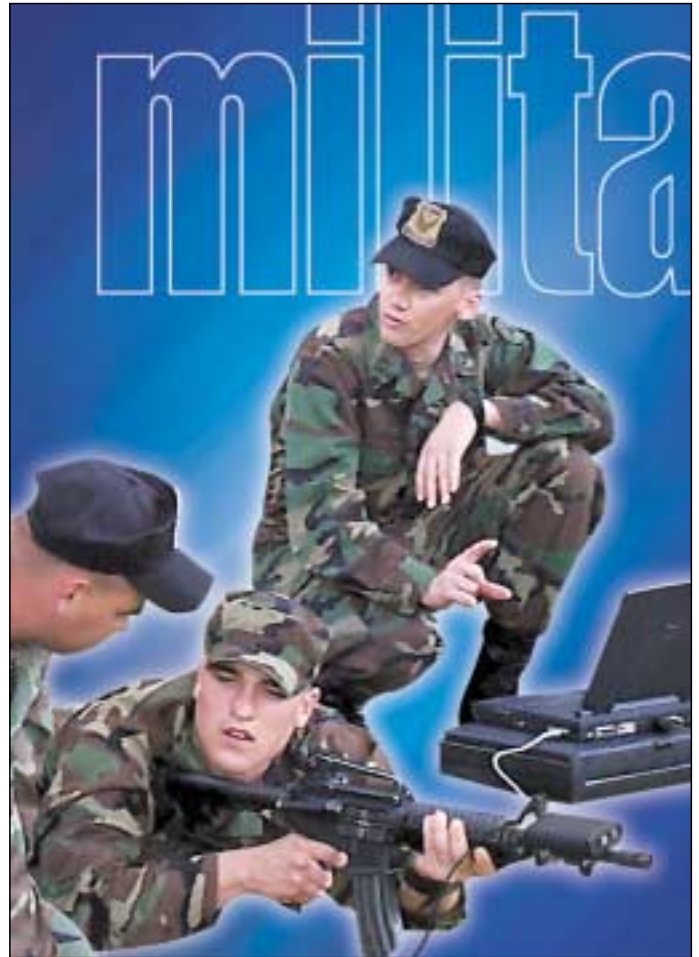

Juha Hirvi, The prominent Finnish rifle shooter:

"Regular training with Noptel has clearly given a boost to the effectiveness and quality of my training. For example, my scores on air rifle have improved considerably in a very short time. The essential issue here is the immediate feedback from Noptel, which prevents the development of bad shooting habits."

ST-2000 SPORT

Amu receives NOPTEL instruction:

"The U.S. Army Marksmanship Unit's Service Rifle team has been training drill sergeants, officers and units with the best possible techniques on how to shoot a rifle and be effective with it along with competing in national and interservice competitions."

ST-2000 MILTRAINER

Noptel marksmanship training products

ST-2000 Sport is an indoor marksmanship training and analysis device for pistols and rifles. The real shooting distance can be from 3 to 100 m. Dozens of shooting disciplines can be simulated at each real shooting distance used.

ST-2000 Marksman is an enhanced marksmanship training and analysis device, intended to be used mainly for military rifles. Outdoor use is also possible in a moderate environment. The real shooting distance can be from 3 to 150 m.

ST-2000 Pistolman is a marksmanship training and analysis device built into a service pistol (9 mm). The real shooting distance is from 3 to 25 m. The device can be built into a Beretta, CZ, FN, Glock, H&K, Makarov, Sig Sauer, Walther or similar pistol.

ST-2000 MilTrainer is an outdoor rifle marksmanship training and analysis device. The real shooting distance is from 10 to 300 m. Several trainees can shoot at a single target simultaneously. Concurrent use of blanks or live fire is also possible.

ST-2000 Sniper is the long range model of the MilTrainer Series. The real shooting distance is from 10 to 600 m.

ST-2000 BigBore is intended to be used for anti tank shooting training and analysis, for example, up to 500 m. The large measurement area (30 m at 500 m) makes it possible to shoot with real lead at moving targets.

The maximum shooting distance for ST-2000 products depends on the number of prisms used on the target.

All ST-2000 products use the NOS software, which provides versatile features for training and analysis.

ST-15 Defender is a simple training device built inside a service pistol (Beretta, CZ, FN, Glock, H&K, Makarov, Sig Sauer, Walther or similar). A reflector is used as the target, and its size and form can be freely chosen. The device acts as a hit indicator. A hit is indicated to the shooter by either a sound or a light signal.

ST-21 Fighter is a versatile but simple and robust outdoor rifle training device. It has three modes of operation: basic marksmanship shooting, pop-up target shooting and tactical combat shooting. Concurrent use of blanks is also possible.

For every possible use

Pistols • Rifles

Indoor • Outdoor

Short distances • Long distances

Standing targets • Moving targets

Dry training • Blanks

Biathlon • Rapid fire

Noptel specialize

in the design and manufacture of innovative optoelectronic products based on distance and position measurement. Our products are divided into two main categories: Shooter training systems and measurement systems for industry and defense forces. Noptel have supplied products and systems to more than 50 countries since 1982.

Shooter training systems

have been the main group of Noptel products for the last 15 years. Noptel was the first company to introduce an advanced optical shooter training and analysis system for everyday use by military professionals, law enforcement groups and sport shooters alike, and the company is now the leading supplier of marksmanship training systems world-wide.

Quality of the products

and good servicing are among the most important factors in designing products and systems for expert users. The Noptel quality system was awarded the ISO 9001 certificate by Norske Veritas in 1997.

Noptel – Marksmanship Training Systems

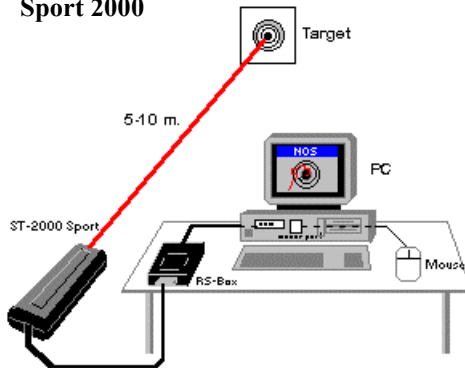

Noptel without a doubt is the best electronic marksmanship training system in the world.

The Noptel training system comes with the latest software which has almost all rifle courses of fire including air gun + a gun and target editor. The target editing software makes any target size you want even custom targets, you can reduce the target size to any distance. This system comes complete with case, software, and targets. It's compatible with all new pc's and almost all old computers, (150mhz or better) either laptop or desktop running windows 95 or better. Best of all, you only need 5 meters of distance between the gun and the target, to simulate any shooting distance/course of fire. The Noptel Sport 2 training system is the latest unit designed in 2004. It includes a universal mount that can be used with nearly any rifle/pistol regardless of brand. See www.ChampionShooters.com for more info.

Computer not included.
